// HowToCombineJSFiles.js

TUTORIAL:

**How to Combine all .js files in all folders that
are in our js folder.**

Getting things ready:

We should add two new lines at the end every script. This way they will combine nicely with a line break in between each script.

Step One: Open our js folder

Step Two: Type in the address bar of the js folder, cmd, press Enter

This opens our js folder in the command prompt

Step Three: Type the command shown below in the command prompt and then press Enter

**for /r "%CD%" %i in (*.js) do type "%i" >>
main.js**

Now we have a newly created .js file named main.js that has all of our js files included into one file.

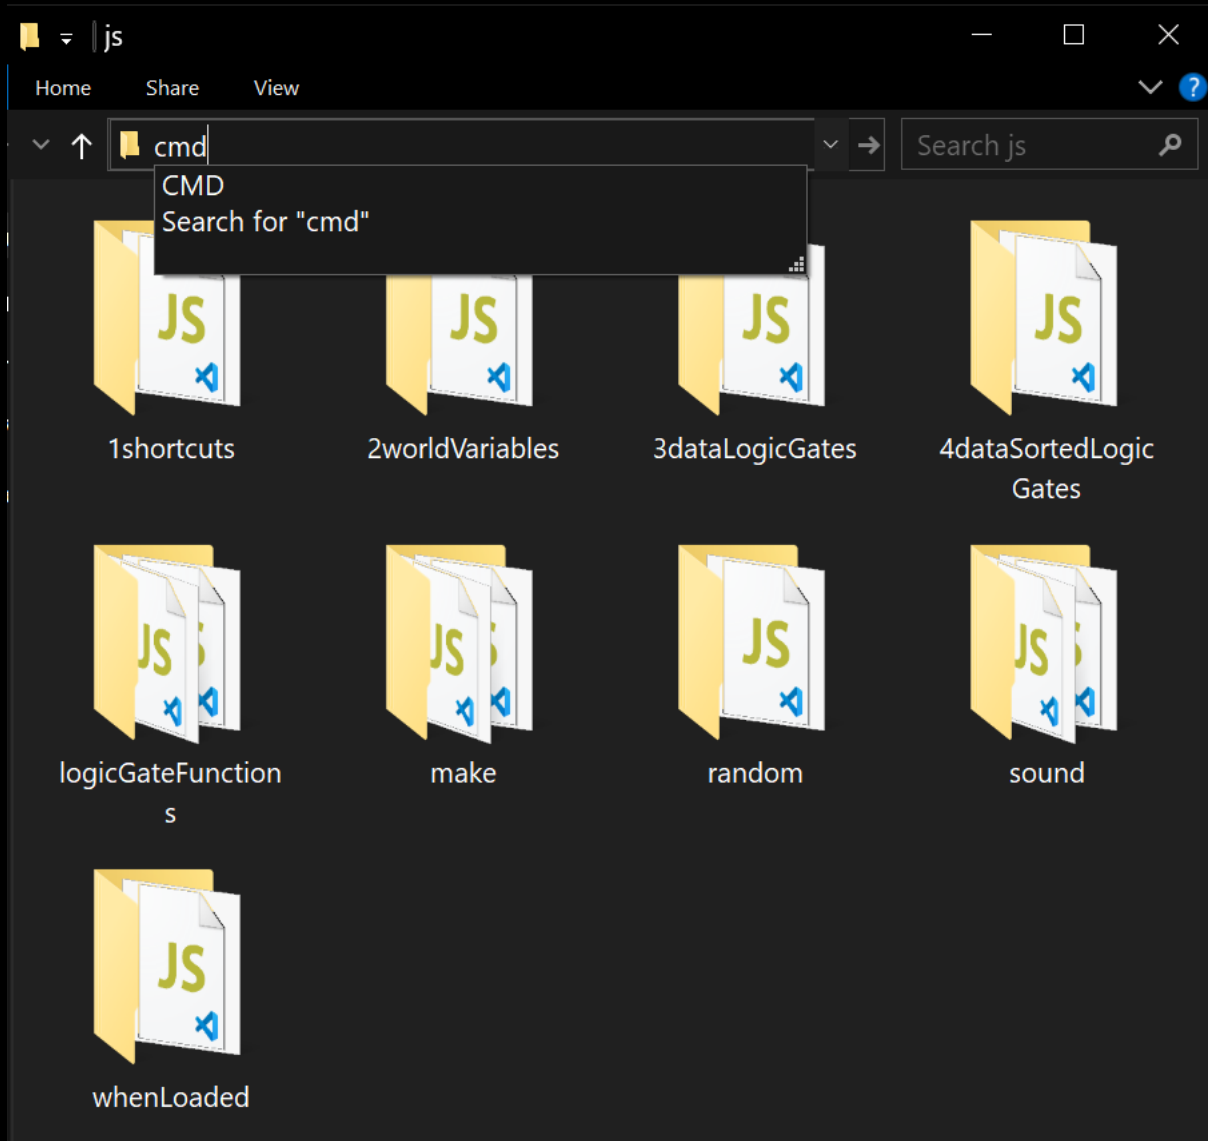

This makes it easy to upload our application and easy to find out how many lines of code our project is.

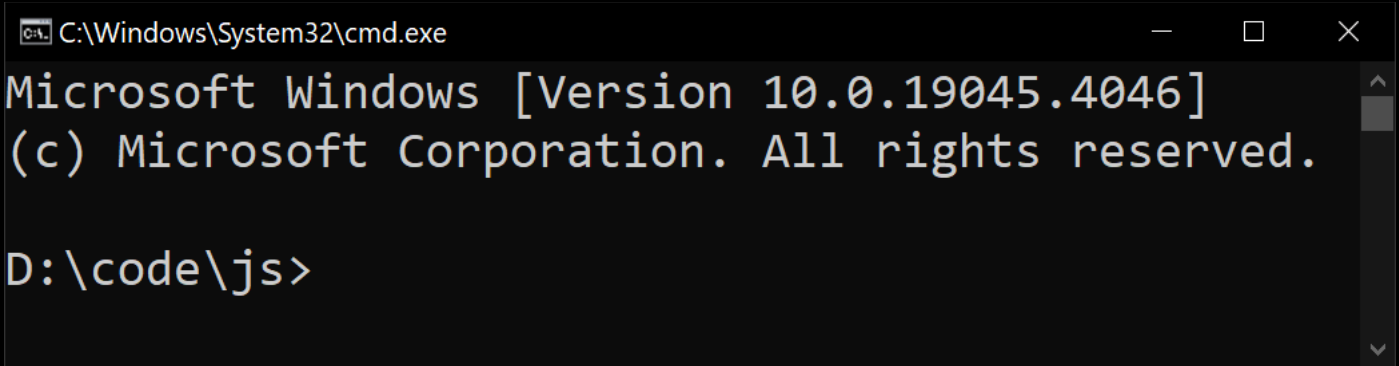

To use our main.js file, we include it in our html file code:

```
<script src = 'js/main.js'></script>
```

Happy Scripting :-)

We Left Click in our js folder address bar and type cmd and then press enter

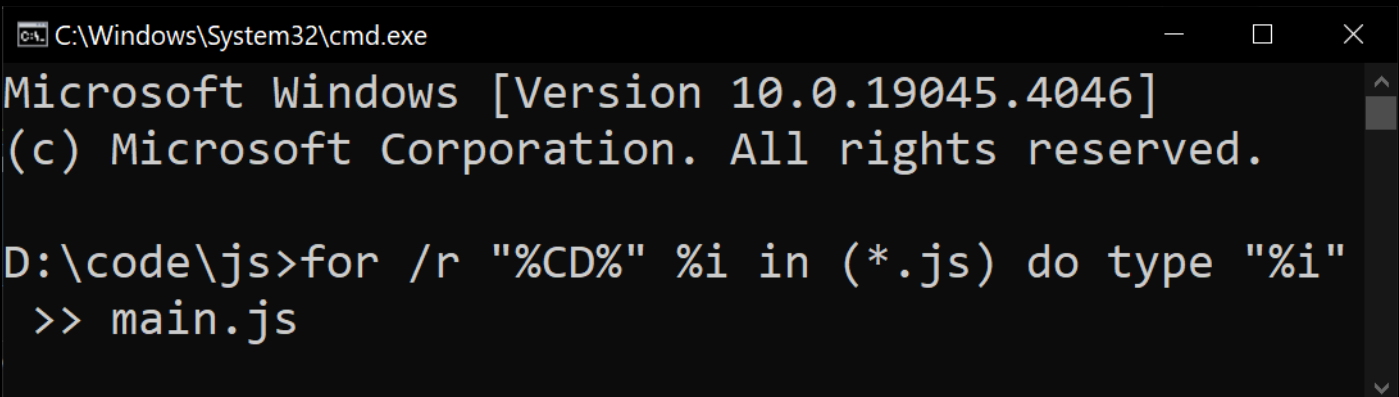

A screenshot of a Windows Command Prompt window. The title bar shows the file path 'C:\Windows\System32\cmd.exe'. The window contains the standard Windows version information and copyright notice, followed by the current directory 'D:\code\js' and a command prompt character '>'.

C:\Windows\System32\cmd.exe

Microsoft Windows [Version 10.0.19045.4046]
(c) Microsoft Corporation. All rights reserved.

D:\code\js>

We type or paste this command:
for /r "%CD%" %i in (*.js) do type "%i" >>
main.js

A screenshot of a Windows Command Prompt window, similar to the one above. It shows the same version information and directory. The command 'for /r "%CD%" %i in (*.js) do type "%i" >> main.js' has been entered at the prompt.

C:\Windows\System32\cmd.exe

Microsoft Windows [Version 10.0.19045.4046]
(c) Microsoft Corporation. All rights reserved.

D:\code\js>for /r "%CD%" %i in (*.js) do type "%i"
>> main.js

We then press enter

```
C:\Windows\System32\cmd.exe
D:\code\js>for /r "%CD%" %i in (*.js) do type "%i" >> main.js

D:\code\js>type "D:\code\js\1shortcuts\shortcuts.js" 1>>main.js

D:\code\js>type "D:\code\js\2worldVariables\worldVariables.js" 1>>main.js

D:\code\js>type "D:\code\js\3dataLogicGates\logicGates.js" 1>>main.js

D:\code\js>type "D:\code\js\4dataSortedLogicGates\sortedGates.js" 1>>main.js

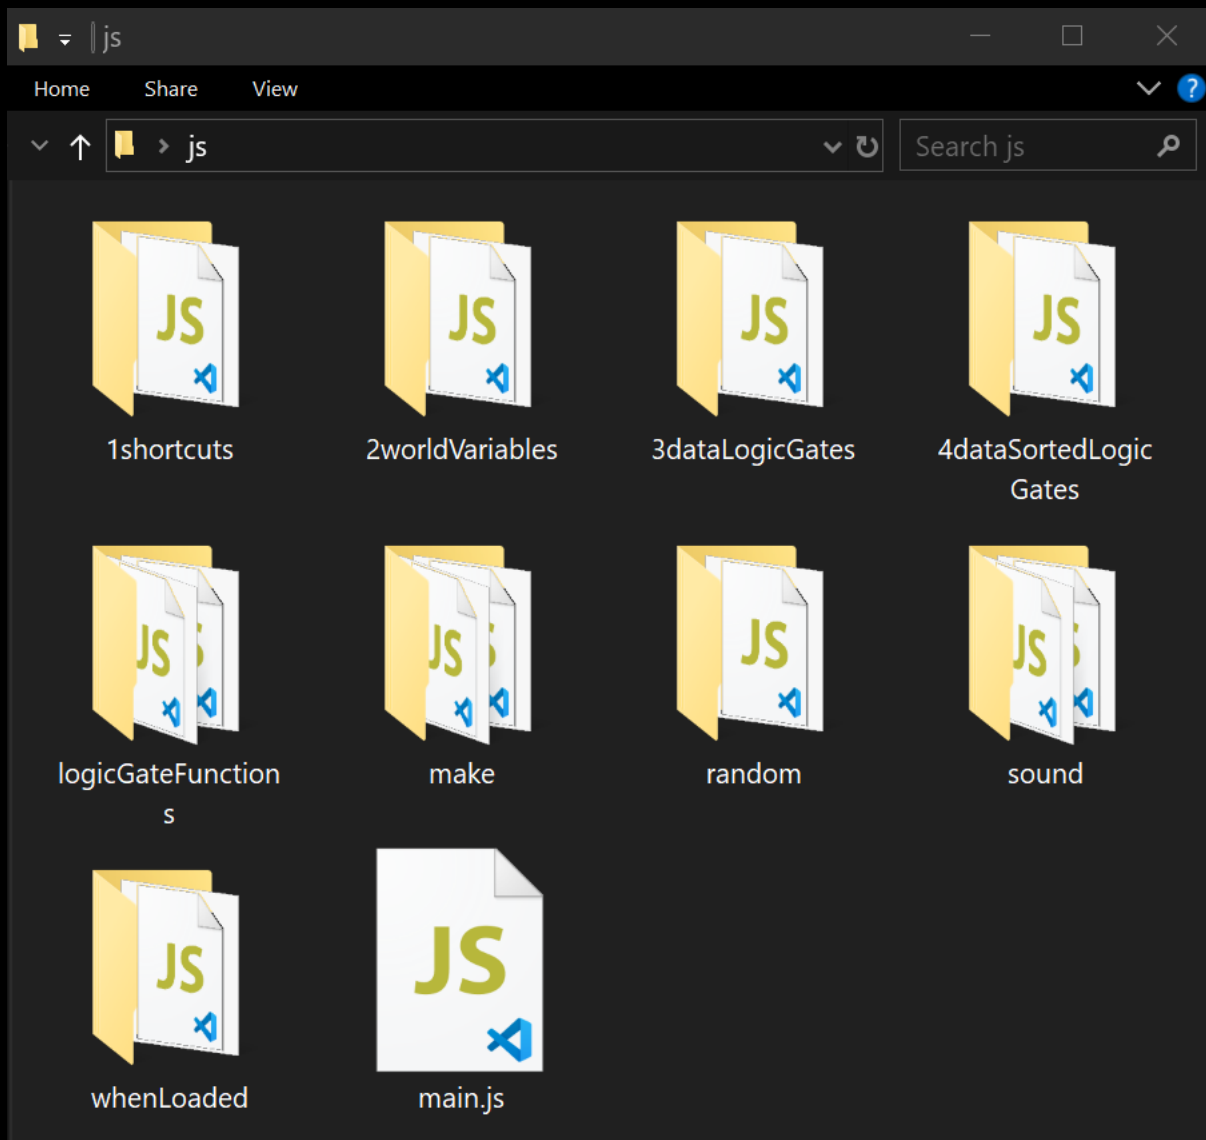

D:\code\js>type "D:\code\js\logicGateFunctions\logicGateFunctions.js" 1>>main.js

D:\code\js>type "D:\code\js\logicGateFunctions\logicGatesCheckInputs.js" 1>>main.js

D:\code\js>type "D:\code\js\make\makeAppButton.js" 1>>main.js

D:\code\js>type "D:\code\js\make\makeCenterPoint.js" 1>>main.js
```

We can see that the scripts in our js folder have been copied into main.js

main.js now exists in our js folder.

Every script in our js folder has now been copied into this main.js file. This makes it very easy to publish our application online.

We can also easily paste our code from this main.js file into a LibreOffice Writer file and export it as pdf to share the code with the world in book form.

In addition, by having this main.js file, we can easily check the total line count of our entire js folder of scripts.

Happy Scripting :-)

Dedicated to God the Father

**This book is created by the
College of Scripting Music & Science.**

**Always remember, that each time you write a script
with a pencil and paper, it becomes imprinted so
deeply in memory that the material and methods are
learned extremely well.**

**When you Type the scripts, the same is true. The
more you type and write out the scripts by keyboard
or pencil and paper, the more you will learn
programming!**

**Write and Type every example that you find.
Keep all of your scripts organized.**

**Every script that you create increases your
programming abilities.**

**SEEING CODE, is one thing,
but WRITING CODE is another.**

Write it, Type it, Speak It, See It, Dream It.
